PROFILE

Computer Science graduate with First Class Honours and hands-on project experience in machine learning, computer vision, data analysis and software testing. Built DeepfakeGuard, a Flask application that detects deepfake images and videos with a TensorFlow model and verifies media files through SHA-256 hashes on a smart contract. Uses AI tools such as Claude, ChatGPT and Codex in a structured, reviewed workflow. Looking for an entry-level role in AI, data, QA or software.

EDUCATION

BSc (Hons) Computer Science – First Class Honours · University of West London, RAK Campus · Sep 2023 – May 2026
Coursework included machine learning, databases and analytics, cybersecurity, networking, mobile development, human-computer interaction and functional programming.

High School · Sainik School Kazhakootam, Kerala, India · Jun 2016 – Mar 2023

PROJECTS

DeepfakeGuard – AI Deepfake Detection and Blockchain Media Verification · Final-year project · Feb – May 2026

- Built a Flask web app for single, batch and video deepfake detection using TensorFlow/Keras (EfficientNetB0 transfer learning) and OpenCV face detection.
- Raised held-out test accuracy from 64% to 80% (fake recall 0.53 to 0.78, 2,416 test images) by moving from full-frame to face-cropped inputs, with a video-level split to prevent data leakage.
- Kept the 80% model over an experimental model with 88% offline accuracy after the latter labelled more than half of fake images as real in live app testing.
- Video pipeline samples up to 24 frames, filters blurred or face-less frames and aggregates predictions; final live tests classified 37 of 40 images and 17 of 19 analysed videos correctly.
- Added SHA-256 file hashing and a Solidity smart contract on a local Ganache blockchain (Web3.py) to register and verify media files.

NorthStar Databases and Analytics · Coursework · 2026

- Analysed logistics data on delivery delays, failed services, complaints and route efficiency using SQL, R and Python (Pandas, NumPy).
- Designed and queried a MongoDB Atlas database through PyMongo and compared indexing and query-optimisation options.

Android App Security and Reverse Engineering · Coursework · 2026

- Analysed a deliberately vulnerable Android app with MobSF and JADX and confirmed that recovered values worked in the running app.
- Built a Java demo app comparing protected and unprotected release builds with R8/ProGuard obfuscation.

Landing Page Build – AUGÉ 10X internship project · Sep 2026

- Researched conversion-focused page structure and built a new landing page for a book product with AI-assisted coding (Claude, OpenAI Codex), using feature branches and pull requests on GitHub.

Machine Learning Classification Study · Coursework · 2025

- Implemented Perceptron and K-Nearest Neighbour classifiers in Python, compared performance and visualised decision boundaries.

EXPERIENCE

Social Media Intern · DreamBox Global, UAE · Jun 2025 – Jan 2026

- Created social media posts, reels and campaign assets for company and client accounts using Canva and Photoshop.
- Updated WordPress and Wix websites and delivered work through client review cycles and deadlines.

SKILLS

- **Programming:** Python, Java, Kotlin, SQL, R, HTML, CSS, Haskell
- **AI, ML and data:** TensorFlow/Keras, OpenCV, transfer learning, Pandas, NumPy, model evaluation (precision, recall, confusion matrices)
- **Web and databases:** Flask, MongoDB, PyMongo, Web3.py, Solidity (basic)
- **Security and networking:** MobSF, JADX, ADB, R8/ProGuard, Cisco Packet Tracer, VLANs and subnetting
- **Tools:** Git/GitHub, Google Colab, Android Studio, Microsoft Office, Figma, Canva, Photoshop, WordPress, Wix
- **AI tools:** Claude, ChatGPT, OpenAI Codex for research, coding and writing, with human review

Languages: English (fluent) · Malayalam (fluent) · Hindi (intermediate) · Tamil (basic)
